```
#include <stdio.h>
int main()
    printf("Enter the length:");
    scanf("%d", &i);
   printf("Enter the string:");
    char arr[i];
   scanf("%s", &arr);
    if (arr[j] == 'b')
        if (arr[j] == 'b')
            if (j >= i)
                printf("valid string");
                printf("Invalid string");
            printf("Invalid string");
   else if (arr[j] == 'a')
        for (j = 1; j < i - 2; j++)
            if (arr[j] == 'a')
            else
                printf("Invalid string");
                break;
```

```
if (arr[j] == 'b')
    if (arr[j] == 'b')
        if (j >= i)
           printf("valid string");
            printf("Invalid string");
        printf("Invalid string");
    printf("Invalid string");
printf("Invalid string");
```
